

**Everything in this Universe is Interconnected with GRAVITY!**

This is why I believe in Almighty!

We should be focused on key issues, however, should not get absorbed or fixated on one issue only. One must see the global or bigger picture, while keeping focus on present key issues. It is a fact that the Earth and everything around us is part of this dynamic universe. These planets start forming somewhere in this Galaxy and perhaps beyond! And end up in Sun like stars and Sun like stars may also have their destination determined by universe!

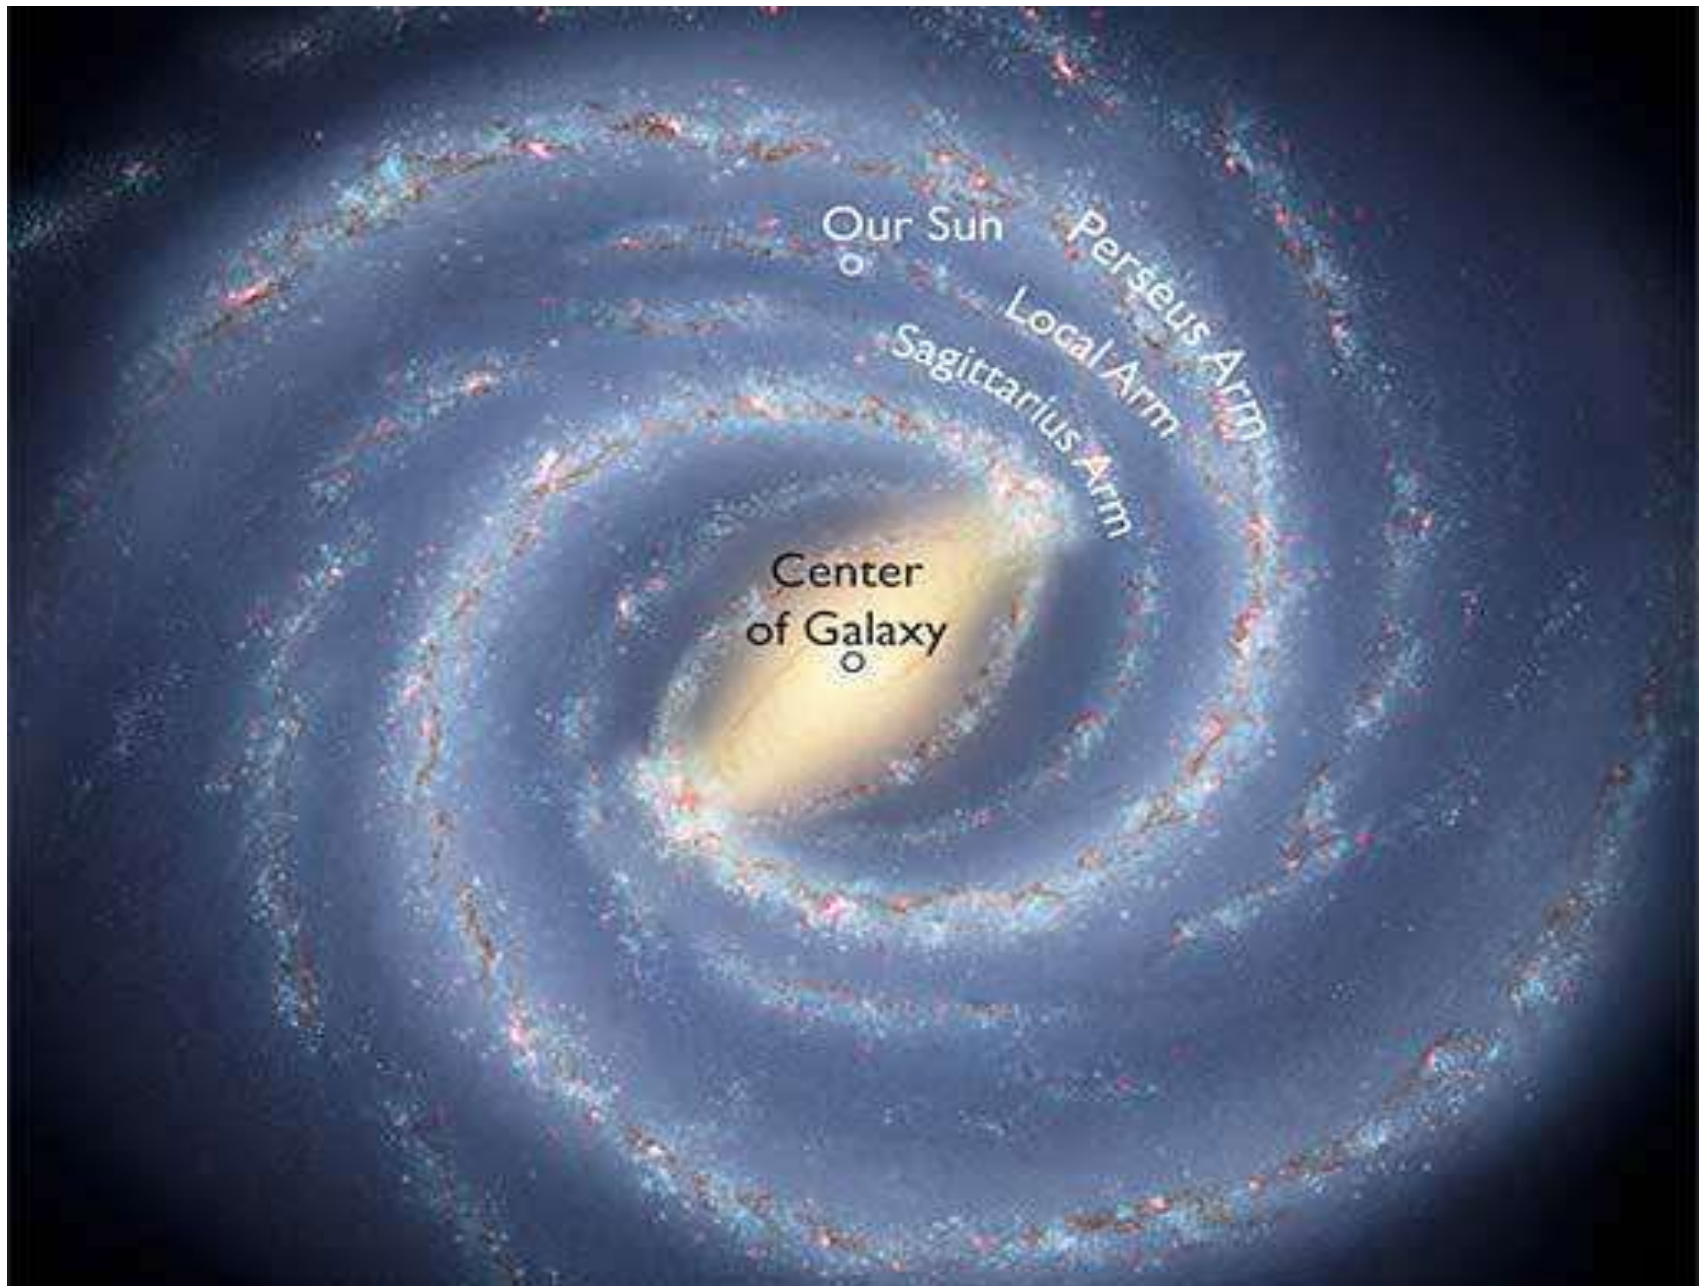

Now talking about time travel of planets from beyond Pluto to Sun, these planets adapt or bear different weathers along the way and produce entities / things on them according to sustainability of weather conditions. You know dinosaurs did not have ability to control and react to dynamic environment around them, human have that potential of sensing and doing something about it. However, human have limited power, mind it, it is not unlimited and hence ultimately this planet will progress through its trajectory and will be where planet Venus and then Mercury and then you know... Sun, It can also be called white big hole in the Universe as compared to Black Holes. it is real, and you know time scale is very large of time travel for these planets towards Sun like star (s) and then perhaps black holes etc... Some people must focus on control of amount of carbon dioxide and others on other relevant issues and so on! This is in very plain and simple words.

And Hope this is not another Galileo moment in History!
